ASSESSMENT 3 · THE WHOLE JOURNEY ON ONE PAGE

Your A3 Roadmap

In A3 you design a method, run it, and evaluate it. Find the step you are at, and see what comes next.

Your aim: design a method and evaluate it

A method that doesn't work as planned can still lead to a strong report, if you run it and explain honestly why it didn't work and what that means for your findings.

Two paths, at the same time

The **method path** designs and runs your method. The **evaluation path** judges whether it worked. Each has its own steps, and they meet at step 11.

	Phase 1 · Design your method Aim to finish by the Week 12 class, Fri 23 Oct · Week 12 Stream A	Phase 2 · Run it Before the Week 13 class, Fri 30 Oct · Streams B and C	Phase 3 · After the run Week 13 class, Fri 30 Oct	Phase 4 · Bring it together Report due 2pm Mon 9 Nov
Method path Design it and run it	**1 Choose your question** A Band 3 or 4 question about your A2 system. Name the leverage point: where in the system your question is about. **Sections 2 and 3** **2 Find the mechanism** What makes the change happen at that point? People's behaviour, social practices, or how a system or organisation performs. **Section 4** **3 Choose a lens** A theory that explains your mechanism. Its parts are the topics your evidence must cover. **Section 4 · method guide** **4 Adapt a futuring technique** So it collects evidence from one step into the future, grounded in more than speculation. **Section 4** **5 Design your method** Two checks. Breadth: does it collect evidence on every part of your lens? Future: take the future out. Does your evidence change? It should. **Section 4** ↻ Going back is normal. If your lens doesn't fit your mechanism, go back to step 3. Finding that now is a good result: write it in your log.	**7 Get it checked** A tutor checks your method, your criteria, and ethics and consent. Then get your materials ready and recruit. **Before you collect anything** **8 Run it** Collect your evidence. A small run is enough: do your method's steps once, from start to end. **Evidence for Section 5**	**9 Analyse** Analyse your evidence against your question. Label each claim: evidence, interpretation, inference or plausible anticipation. **Section 5**	**11 Judge and recommend** Your two paths meet here. Make a recommendation as strong as your method allows, and no stronger. Write your "What this evaluation can tell you" statement. **Section 7** **12 Write and defend** Account for your sources and AI use. Choose your report format and name a specific reader. Then the critical discussion, 10 to 13 Nov. **Section 8 · whole report**
Evaluation path Did it work?	The evaluation path asks whether your method worked. Set it up before you run, so you can judge your method fairly afterwards. **6 Set your yardstick** Three or four method evaluation criteria, and your strongest claim: what your method could show if everything went to plan, and what it couldn't. Write them in a dated log entry before you run. **Section 4**	**• Keep run notes** Short, dated notes: who took part, what changed, and every AI output and how you checked it. **Evidence for Section 6**	**10 Evaluate your method** The three moves: test each criterion with evidence from your run; compare with your strongest claim; say what your findings can and cannot carry. **Section 6**	
Working log All the way through	**Working log, all the way through.** Add a dated entry each time you decide something: what you decided, what else you considered, and why. Never edit an earlier entry; add a new one. Your log goes in your report as an appendix, and the critical discussion draws on it.
